LDPE/EVA Market and Opportunities

*Ms. Daisy Lee
Licensing Manager, Polymers
Catalysts and Licensing
ExxonMobil Corporation*

Synopsis

With over 45 years of operation experience, ExxonMobil's LDPE/EVA technologies provides licensees with flexible processes, yielding a broad product portfolio from general purpose LDPE to specialty EVA. Our tubular and autoclaves technologies incorporate our company's most recent commercial technology with a focus on operating cost and reliability. More than twenty-five autoclaves and tubular facilities are operated by ExxonMobil or use our technologies, producing more than 3 million tons per annum of LDPE/EVA globally. Besides grassroots projects, ExxonMobil also offers retrofit solutions to improve safety, product capability, production capability of non-ExxonMobil LDPE/EVA processes to enable improvement of a plant's competitiveness. This paper will provide market overview and outlook of LDPE and EVA markets in the Indian subcontinent. In addition, it will also describe ExxonMobil Chemical's LDPE/EVA technologies offerings as well as case studies on retrofit projects that bring extra profitability to customers.
