Self Sufficiency in PVC - Route to Reality

*Mr. Francis Tsang
Director, Chemicals
KBR Technology*

Synopsis

With nearly 50% of annual consumption being filled by imports and an expected aggressive growth in future demand, self-sufficiency in regards to domestic PVC production is more critical than ever. Driven by growing markets in infrastructure and agriculture, an opportunity exists for Indian companies to reduce dependencies on imports and increase domestic manufacturing levels. KBR will present capital and operating advantages of the PVC technology that it co-markets and co-licenses with its partner JNC. With a long history of successful PVC project implementations and the ability to produce a broad range of high quality PVC products with an efficient use of raw materials, the KBR-JNC PVC technology is ideally suited for the growing demands of India.
